

Negatively Triangular

G2_RT6

Something inspired by [this NRICH resource](#).

I think that we can turn this into a more substantial resource, perhaps making more explicit the multiple approaches and representations that could be involved.

I think that we could also extend it so that it has parts that aren't just about equations of straight lines.

Relevance

E2 How is the solution of equations related to problems in geometry?

G2 What is the connection between algebra and geometry, and how can we exploit it?
